Summary

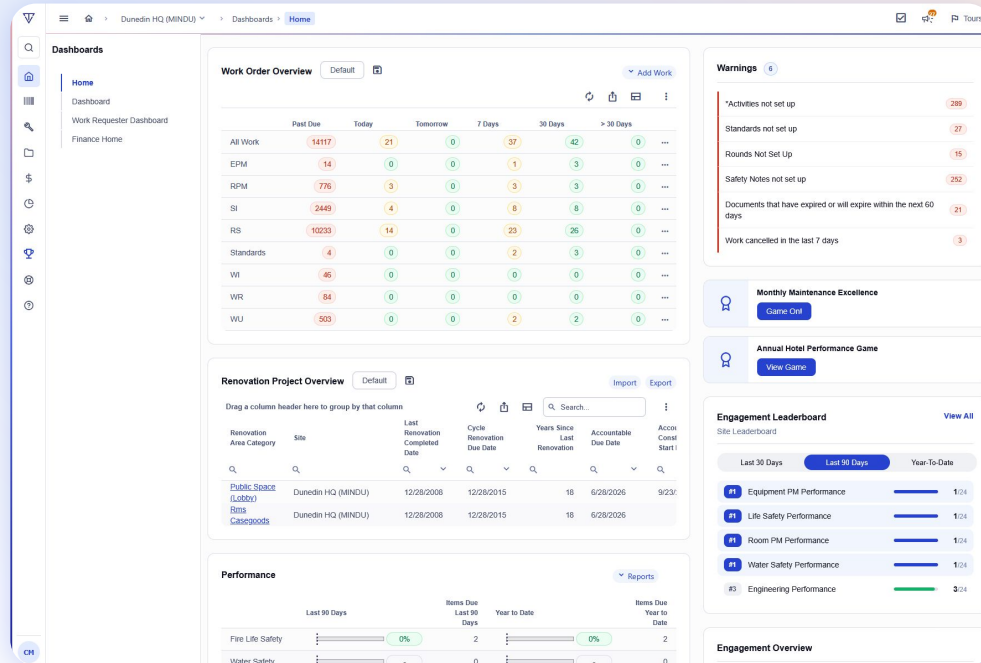

Transcendent's fresh new look is now aligned with the Actabl brand. Users will experience a cleaner, lighter color palette with crisp whites and grays, with thoughtful pops of color. Navigation has been streamlined with a new sidebar design and breadcrumb header - but all of the old pages, data, and workflows remain exactly where you expect them.

Value

This visual refresh lays the groundwork for future simplification efforts coming to Transcendent. This represents the first step in an ongoing commitment to make the application easier and faster to use every day.

Persona(s)

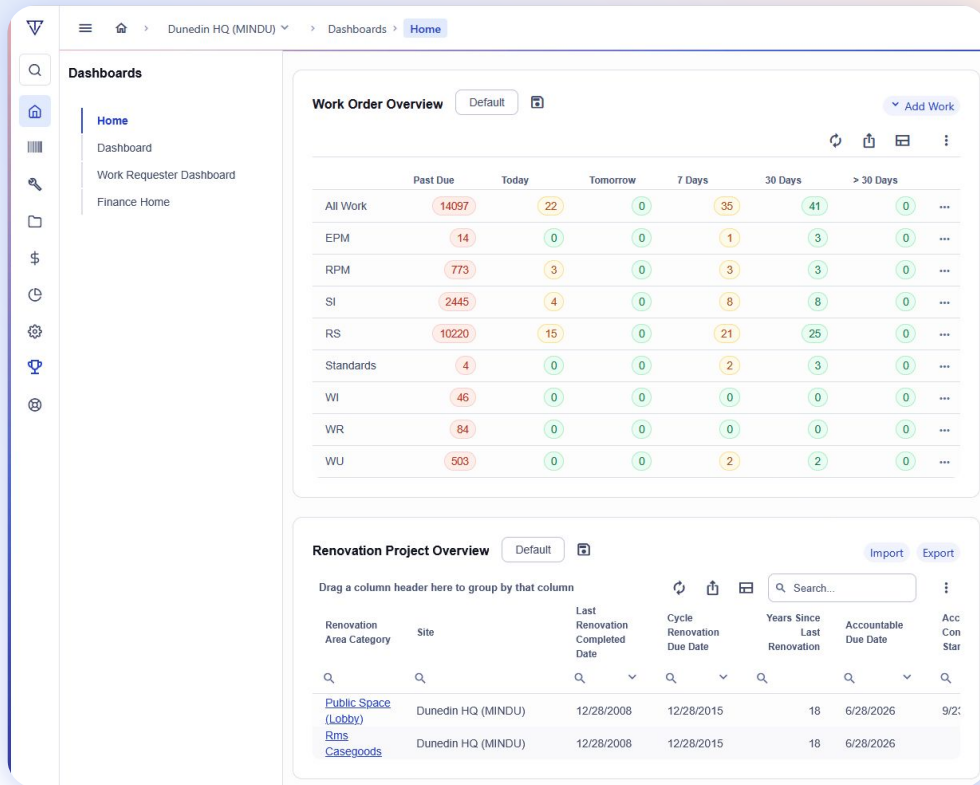

All Transcendent Users

Summary

The new menu replaces the previous navigation with a clean, two-part design. The new side menu features icons for each major section of the application, and an expandable feature panel that shows individual pages. The feature panel can be toggled manually which lets users maintain control over their workspace.

The previous user profile menu has now been moved to the bottom of the side menu, allowing users to view their profile, change role, or log out by clicking on profile icon.

The screenshot displays the 'Dashboards' section of the application. The left sidebar contains a search bar and a list of dashboard options: Home, Dashboard, Work Requester Dashboard, and Finance Home. The main content area shows two tables.

Breadcrumb Navigation

Summary

The application header now shows a breadcrumb trail that tells you exactly where you are in the application. Each breadcrumb shows your path from the home page down to your current page, with clickable links that let you jump back to the home page.

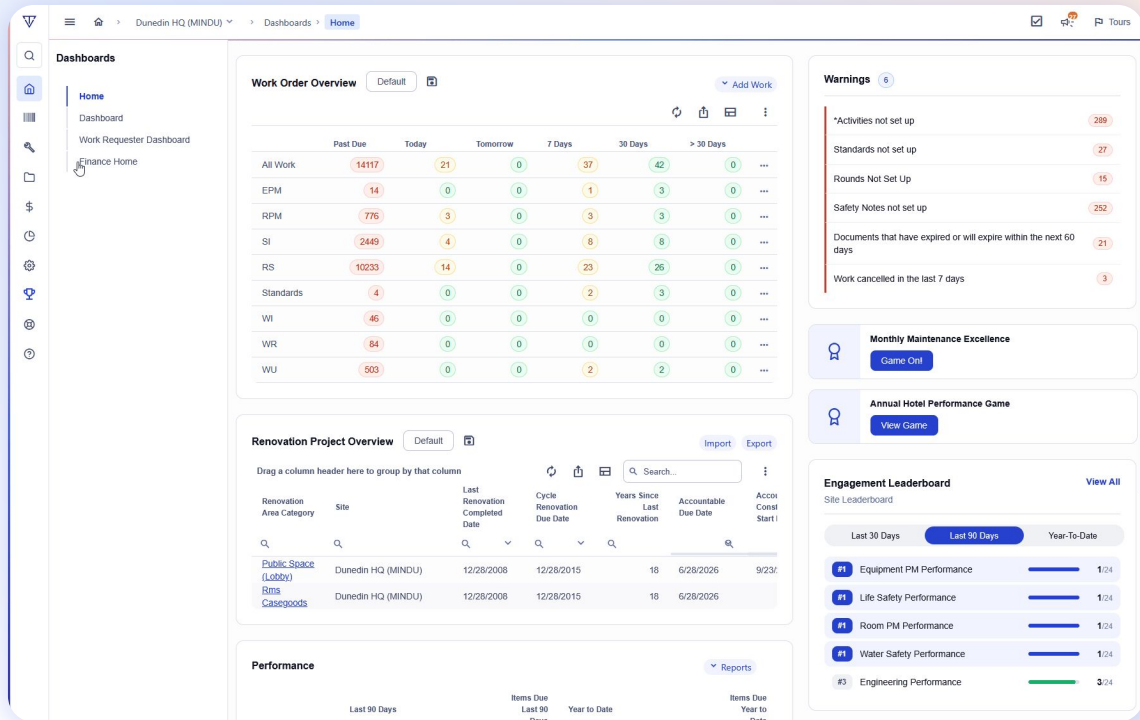

Your current visibility is also present in the breadcrumb navigation, and still has the same site-switching capabilities.

Summary

A new quick search lets you jump to any page in the application instantly, accessible by clicking on the search icon in the side menu. Start typing and results will appear immediately, grouped by sections and full breadcrumb paths so you can easily distinguish pages with similar names.

This was implemented to allow our most proficient users to quickly navigate directly between pages across the application.

The screenshot displays a comprehensive dashboard interface. On the left, a sidebar menu includes a search icon at the top, followed by navigation options like Home, Dashboard, Work Requester Dashboard, and Finance Home. The main content area is divided into several sections:

- Work Order Overview:** A table showing counts for various work orders across different timeframes (Past Due, Today, Tomorrow, 7 Days, 30 Days, > 30 Days). Rows include All Work, EPM, RPM, SI, RS, Standards, WI, WR, and WU.
- Renovation Project Overview:** A table with columns for Renovation Area Category, Site, Last Renovation Completed Date, Cycle Renovation Due Date, Years Since Last Renovation, Accountable Due Date, and Action Cost Start Date. It lists projects like Public Space (Lobby) and Rms Casagoods.
- Performance:** A section for tracking performance over the last 90 days, with options to view data by Last 90 Days, Year to Date, and Items Due.
- Warnings:** A list of warnings such as 'Activities not set up', 'Standards not set up', 'Rounds Not Set Up', 'Safety Notes not set up', 'Documents that have expired or will expire within the next 60 days', and 'Work cancelled in the last 7 days'.
- Monthly Maintenance Excellence:** A section with a 'Game On!' button.
- Annual Hotel Performance Game:** A section with a 'View Game' button.
- Engagement Leaderboard:** A section showing performance metrics for various categories like Equipment PM Performance, Life Safety Performance, Room PM Performance, Water Safety Performance, and Engineering Performance.

Dashboard Reorganization

Summary

As part of the visual refresh, we've grouped the four existing dashboards into a dedicated Dashboards section in the sidebar. Previously these were spread across different areas of the menu, making them harder to find.

Announcements

Summary

The announcements panel has been updated to help users stay on top of what matters. Each announcements now displays a relative timestamp and a dot to indicate which announcements you've read and which ones you have not. We've also added the ability for users to mark all of their announcements read.

Summary

Data grids across the application has received several quality-of-life improvements to make working with large datasets easier. The less used toolbar actions have been moved into an overflow menu to keep the toolbar cleaner.

Data grids now feature alternating row colors to make data easier to read across wide rows of data. In addition, headers and toolbar buttons now display tooltips on hover, which allow users to quickly identify truncated column names for extremely large data sets in reports.

Summary

The previous error pages have been redesigned with clearer messaging so users know what happened.

If you land on a page that you don't have permission to access, you'll see a lock icon and a straightforward explanation with a back button to return where you came from. The same treatment applies to pages that don't exist.

Other Improvements

Summary

Button placement across all dialogs and modals have been standardized, Cancel/Close actions are now consistently on the left, and Save/Submit actions on the right. This applies everywhere from work orders and asset management.

Additionally, the help display has been refreshed with a cleaner layout and reorganized content, making it easier to find guidance when you need it.

The screenshot shows a 'Replace' dialog box with a close button (X) in the top right corner. Inside the dialog, there is a help topic section titled 'Help Topic - Helpful Information About Work Orders' with a pencil icon. Below this, a text box states: 'On this page, one can edit the details about a work order.' The main content area of the dialog is divided into two columns. The left column contains the following fields: 'Cost (CAD)' with the value '266', a blue button labeled 'Select Existing Asset', 'Current Asset' with the value '500004', 'Current Asset Budget Year' with the value '2024', and a date input field labeled '(New Asset) Date in Service *' with a calendar icon. The right column contains the following fields: 'Interval' with the value '1', a green button labeled 'Create New Asset', a link labeled '→ New Asset', and a link labeled '→ New Asset Budget Year' with the value '2025'. At the bottom right of the dialog, there are two buttons: 'Exit' and 'Save'.
